

DIENES Quick- and Safety-Change Device “Easy Eject”

“Easy Eject” offers a quick and easy knife removal and provides more safety in the production process.

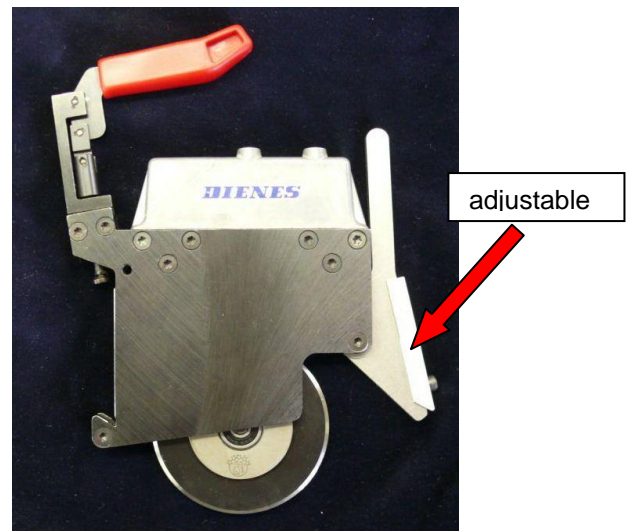

For a knife removal the knife holders are at first removed from the machine. By using “Easy Eject” the knife is pushed out of the knife holder so that the knife can be exchanged easily.

In addition to the simplification of the knife exchange “Easy Eject” also provides more safety for the slitting process. The moveable metal section at the outer area of “Easy Eject” (see photos below) can be adjusted in such a way that it closes the gap between the knife and the material web. For this reason “Easy Eject” minimizes the risk of reaching into the slitting area.

We will be pleased to retrofit your existing knife holders with this quick- and safety change device.

1. Swivel-mounted for knife exchange

2. Knife is removable

Benefits:

- | ideal complement for positioning systems
- | minimal setup time
- | exchange of knife without tools
- | ergonomic design considering safety aspects
- | safe, quick, retrofittable und accurate
