

DIENES “Quick Clamp“

With the child's play “Quick Clamp”, knife holders in longitudinal slitting machines are fixed, interchanged and repositioned quickly and easily. It fits on any bar and grants infinite clamping force.

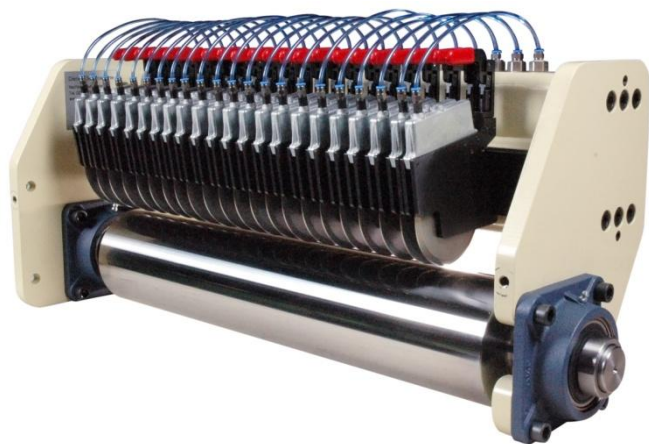

The fixing lever is opened easily with one movement, the knife holder is positioned on the bar according to the slitting demands and the lever is closed again. Now the knife holder is fixed safely and precisely.

In addition “Quick Clamp” does not require any fixing tools. The mechanism can be adapted to all bars, keeps the holder from moving laterally or from loosening during the slitting process and grants optimum slitting quality, simultaneously offering a high degree of user convenience.

“Quick Clamp” is available for crush, shear and razor blade cut.
We will be pleased to retrofit your existing knife holders with our “Quick Clamp”.

Benefits at a glance:

- | ideal complement for positioning systems
- | suitable for shear, crush and razor blade cut
- | rectangular clamping of the holder
- | minimum setup time
- | toolless positioning of knife holders
- | safe, quick, retrofit und accurate
